

Sediment Control can be extremely difficult and expensive. Fine sediments in water have no time to settle out before being discharged to the storm water system. Use of treatment tanks and flocculants may be required

0 mg/L 20 mg/L 100 mg/L 420 mg/L 1250 mg/L 3300 mg/L

Bylaw Requirements for Sediment Discharge

< 25 mg/L May till September

< 75 mg/L October till April

Erosion Control

Cover all areas on site

- Retain existing vegetation where possible
- Plastic cover for soil stockpiles
- Gravel cover in all other areas on site including the base of your excavation.
- Retain existing driveway and supplement with gravel.
